

APOLLO

Maxfill

Apollo MaxFill is the only system of its type currently in-production and is a popular choice with environmentally responsible fuel distributors who wish to reduce the risk of overfills and spillage during delivery.

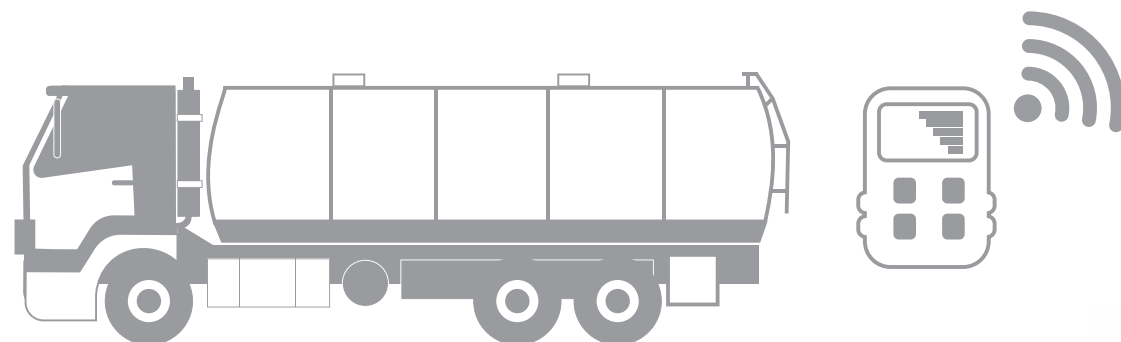

Features

- » Inbuilt, multi-segment LCD display
- » Single handed product display
- » Intuitive product operation
- » Rugged and durable construction
- » Long battery life
- » Inbuilt audible and visual warning alarms
- » Secure FM, wireless transmissions.

Benefits

- + Facilitates, cleaner, safer refuelling and reduces the risk of spillages during delivery
- + Assists in ensuring compliance with secondary containment requirements
- + No mains wiring or connection required
- + Compatible with all Apollo Ultrasonic tank sensors.

Fill Points

- + Ideal for remote and offset fill points.

Cost Effective

- + Cost-effective, affordable and convenient alternative to bespoke, custom made, alternatives.

Contactless

- + Contactless analysis technology and the absence of a direct connection to the fuel supply line eliminates the risk of spills & leaks.
