International Communications Company

Success Story: TANK MONITORS TO OPTIMISE AND INCREASE AVERAGE AUTO DELIVERY

International Telecom Company based in Iraq offering customers both mobile phone services and mobile internet services. Providing their 13 million customers with a positive customer experience through their fast network.

THE CHALLENGE

This international company has over 5000 tanks in deployment throughout Iraq, each tank linked to a generator. If these were to empty, it could cause mass disruption to their daily business operations and their customers using the network.

THE SOLUTION

Dunraven Systems Delta Software offers the capabilities to help monitor fuel tanks remotely, collecting the data from each in an orderly and easy to understand manner.

"As a result of working with Dunraven and having deployed their solutions on our tanks – we have managed to reduce our stock holding in each tank to 40%."

It provides end users with simple graphs and relevant data to help customers make more informed decisions and therefore, excellent savings on their home heating.

THE RESULTS

With the installation of Dunraven's Delta System, this telecom company saved \$10 million in a year and was also able to dispense of any unnecessary employees. Delta ensures that alerts are sent in the event a tank is running low and due to this, the company no longer have to ensure they have fuel stock of between 60 % & 80% at hand. Because of this, they are reaching massive savings.
